

## CONTROL PANEL

The Omni Tools - Control Panel allows the configuration of many of the features in Omni Tools.

The Control Panel settings can be applied to 4 levels:

- system wide
- all users of the current company
- all companies for the current user
- current user of the current company

## TESTIMONIALS

Thank-you SO, SO much for all your help. I know how important customer service is to any business and I'm very satisfied with your company. Sometimes troubleshooting can be very time consuming, and I want you to know how much I appreciate all the time and effort that you put into resolving my issues and answering my questions. Thanks again for your time and patience.

Glenda Homan

PDRx Pharmaceuticals, Inc

Just to let you know that we have been using Omni Price for four months now without a hitch. It has lived up to all our expectations without problems and has greatly increased our productivity and more importantly dramatically decreased the number of errors we had when modifying pricing manually.

# Omni Tools

Omni Tools is a powerful and intelligent suite of modules designed to secure, integrate and simplify day to day operations in Microsoft® Business Solutions–Great Plains®.

# Need better security? Trouble with stuck batches?

## Want to change the menus?

### Omni Tools will handle these issues and more.

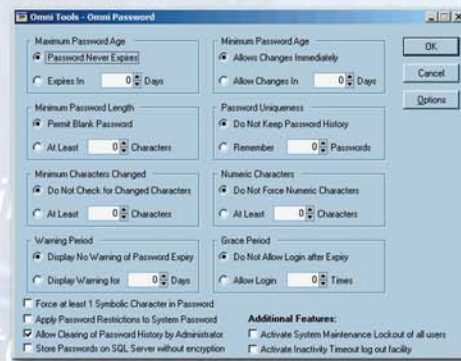

#### SECURE YOUR DATA

All your critical business and financial information is stored in your computer system. Your staff needs to be able to access and enter data. But who else can access it? Make sure that the right people are entering the right information.

#### OMNI PASSWORD

Omni Password strengthens the password security of Great Plains. It allows for eight different security checks to be added to both the user and system passwords:

- set the length of time a password can be used for
- set a minimum password length
- force changes between old and new passwords
- force a number of numeric characters to be included in passwords
- disallow password recycling
- set expiry warning periods and a number of grace logins

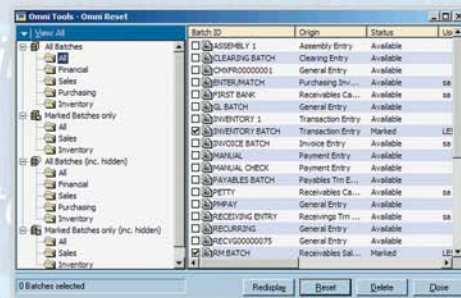

As an additional security measure Omni Password can be used to detect user activity. If no activity is detected over a nominated period the system will attempt to automatically log the user out of the system. This helps prevent unauthorized personnel viewing or accessing data left on an unattended workstation. The inactivity logout has the added benefit of minimizing idle usage of concurrent registered users.

When it is necessary to perform system maintenance Omni Password can be used to notify users that system maintenance is pending and lock users out while maintenance is in progress. This can be done by company or for the whole system.

#### OMNI RESET

When a system crash occurs during batch editing or transaction level posting, "hidden" or real-time batch information can be left unprocessed. Omni Reset can secure and restore your information after a system failure. Omni Reset will:

- reset held batches
- reset batch header status
- delete unwanted batch records
- delete batch activity records
- replace Techknowledge #7213 with a single click fix

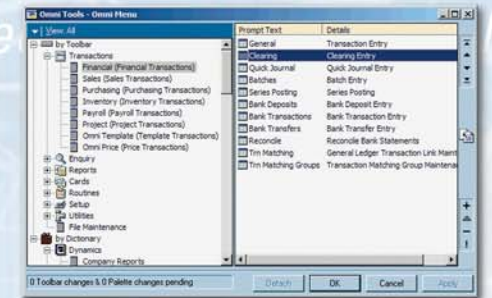

All relevant batch information is presented using a simple and familiar Explorer style interface.

#### INTEGRATE AND CUSTOMIZE

The power of your system is measured by how well it fits your needs. How easy is it to enter and access the information specific to your company?

#### OMNI MENU

Omni Menu provides a simple to use interface to customize toolbar and palette menus. It can be used to add core or third party windows, move frequently used toolbar or palette entries, delete unnecessary items and rename entries to suit your company terminology.

The familiar Explorer style interface makes Omni Menu easy to use, letting the user view all applications, macros or windows in every dictionary loaded. Unlike Modify Palettes, Omni Menu allows editing of the system toolbar and third party application palettes that store their entries in the standard palette table.

#### OMNI PALETTES

Omni Palettes provides two user defined palettes. These can be customized for common, company based tasks. Each palette can contain up to 25 entries.

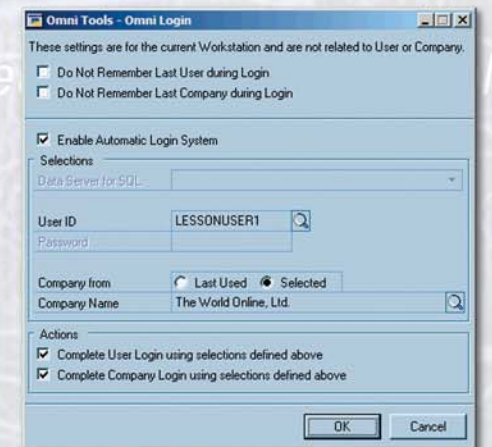

For example, a custom menu of daily tasks can be placed on a single palette. The palette can then be added to the Shortcut bar, to another palette or directly onto the Toolbar using Omni Menu.

#### SIMPLIFY DAY TO DAY OPERATIONS

Reduce user error and frustration by making repetitive procedures automatic and adding useful reminders.

#### OMNI LOGIN

Omni Login automates all or part of the login procedure. It can be set up to automatically select which user and/or company to log into for each workstation. It can also be used when the system needs to login to perform automated tasks.

Omni Login can set the Last Company Used as the default when logging in even if the Automatic Login System is not enabled. Additionally, you may set Omni Login to prevent the system storing the Last User or the Last Company. This improves security on a Citrix or terminal server system, where the last user is normally shown.

#### OMNI NOTIFY

Omni Notify provides a number of additional dialogs to simplify using Great Plains. These include:

- a warning dialog on exiting to prevent accidental closure
- notification if a selected palette has no entries
- messages when the toolbar or palette entries point to forms which cannot be opened
- displaying the name of the company logged into on the Title Bar

Omni Notify is registered free of charge when any other module is purchased. It is not for individual sale.
